

ELC15W24/48 Series

Wide Input, Isolated 15Watts DC/DC Converters

FEATURES

- Cost-effective
- 4:1 wide input range: 9-36/18-75VDC
- Single outputs: 3.3, 5, 12, 15, 24Volts DC
- 15W isolated output
- Efficiency up to 91%
- 1.5KVDC I/O isolation
- Operation temperature: -40°C to +85°C
- Standard 1.0"×1.0"×0.47" DIP footprint, Din-rail & wall mount type options
- Extensive self-protection, UVLO, OTP,
 OVP, OCP and short-circuit protection
- Outstanding thermal dissipation
- Fully encapsulated, high reliability
- MTBF ≥ 1 MHrs
- Compliance with RoHS

PRODUCT OVERVIEW

The ELC15W24/48 series are highly reliable, and efficient isolated DC/DC converter. Wide input range of 9-36 (24V nominal)/18-75V (48V nominal) is ideal for automation, power grid, semiconductor equipment, instrumentation, test and measurement, and distribution power system.

A wealth of self-protection features included input under-voltage lockout, over temperature shutdown; overcurrent protection with "hiccup" autorestart technique, provides short-circuit protection, along with output OVP.

Advanced fully encapsulated package technology provides outstanding EMC and thermal performance, which is ideal for ruggedized applications involving harsh environments. Wall mount and Din-rail mount type are available for maximum design-in flexibility.

The ELC15W24/48 series are designed to safety standards IEC/EN 62368-1.

Notes

- 1 Ripple & noise is tested with certain filter parameters, please see output ripple & noise intechnical notes on page 8 for more details.
- 2 Load is set from 50%-75%-50% of full load, di/dt=0.1A/ μ S.

All specifications are tested at 25 °C ambient temperature, nominal input voltage, rated output current conditions unless otherwise specified.

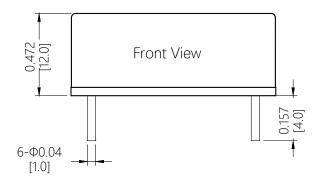

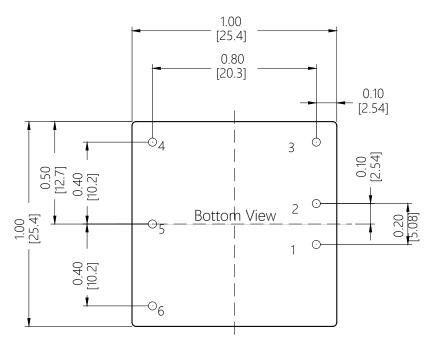

ELC15W24/48 Series

Wide Input, Isolated 15Watts DC/DC Converters

Mechanical Specifications

ELC15W24/48 SERIES: DIP TYPE

PIN:

Pin1, PIN2, PIN3, PIN4, PIN5, PIN6: Φ 0.040

Force: Applied force not exceed 4.9N

Material: Copper alloy

Finish: Tin 3 \sim 5µm(min.) over nickel 50µm(Min.)

TOLERANCE:

 $X.XX = \pm 0.02 (0.5)$ $X.XXX = \pm 0.010 (0.25)$

Dimensions are in inches [mm]

Weight: ~15g.

| PIN CONNECTIONS | | | | |

ELC15W24/48 Series

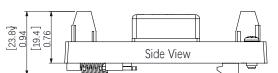

Wide Input, Isolated 15Watts DC/DC Converters

Emissions Performance

Density Power measures its products for conducted emissions against the EN50121-3-2 standards. The common mode filter is added at the output of the module, and the maximum output power of the module is 15W. Input voltage is 24/48VDC, EMI filter is added outside the modules and the conduction limit can meet standards.

Conducted Emissions Test Circuit

Recommended Filter Parameters

| Reference | Description For 24 Vin | Description For 48 Vin | | |
|-----------|------------------------|------------------------|--|--|
| Mov1 | 20D470K | 14D101K | | |
| C1 | 680μF/50V | 680µF/100V | | |
| C2 | 1μF/50V | 1μF/100V | | |
| C3 | 330µF/50V | 330µF/100V | | |
| C4 | 4.7μF/50V | 4.7μF/100V | | |
| C5 | 10μF | 10μF | | |
| LCM | 2.2μΗ | | | |
| CY1, CY2 | 1nF/2KV | | | |

ELC15W24/48 Series

Wide Input, Isolated 15Watts DC/DC Converters

Technical Notes

INPUT FUSING

Certain applications may require fuse at the inputs of power conversion components. Fuses should also be used when there is possibility of sustained input voltage reversal which is not current limited. The ELC15W24/48 modules are not internally fused. We strongly recommend a slow-blown fuse to be used in the ungrounded input supply line. For safety agency approvals, the installer must install the converter in compliance with the end user safety standard.

TYPICAL APPLICATION CONNECTION

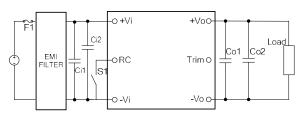

Figure 1. Typical Application Connection

In order to prevent the input line from causing the input oscillation, it is recommended to add the input capacitor close to the input of the module. Similarly, the output capacitor is added to the output of the module. Specific recommended parameters: input capacitance Ci1=100µF electrolytic capacitor, Ci2 = 1uF CBB capacitor. Output Capacitance Co1=10uF tantalum capacitor, Co2 ESR <0.1 Ω . Please refer to capacitive load for details.

REFLECTED RIPPLE CURRENT

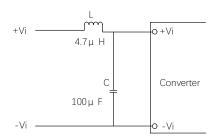

Figure 2. Reflected Ripple Current

Add LC filter at the front of the power module to reduce the interference of reflected ripple current on the DC bus, recommended value of L and C with appropriate current and voltage rating as below: $L=4.7\mu H$; $C=100\mu F$.

REMOTE CONTROL FUNCTION

Module Power Remote Control or called ON/OFF pin is for the user to enable or disable the output. Control use high and low level control which is positive logic. Recommend to use optocoupler to control ON/OFF Pin as below.

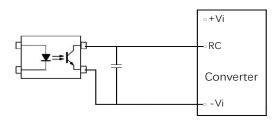

Figure 3 Remote Control

Remote Control Pin can be connected in parallel for multiple converters which with the same Remote Control characters. However, when several converters share the same remote control circuits, the total sink and source current must be taken into consideration, and make sure that the optocoupler has enough drive capability.

To reduce external PCB trace interference, it is recommended to add high frequency bypass capacitor between RC pin and -Vi, recommended capacitor value is 100-1000pF.

OUTPUT RIPPLE & NOISE

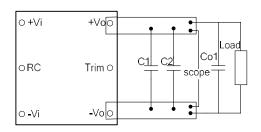

Figure 4. Output Ripple & Noise

ELC15W24/48 Series

Wide Input, Isolated 15Watts DC/DC Converters

Technical Notes

These ELC15W24/48 modules' output ripple and noise is measured at the rated input voltage and output current, along with 10uF and 0.1uF MLCC used in parallel with appropriate voltage ratings and placed as C1, C2 shown in the figure above. The scope's bandwidth is set to 20MHz.

External output capacitors are required to reduce the ripple & noise. The output capacitors should be low ESR and appropriate frequency response with appropriate voltage ratings, and must be located as close to the converters as possible, also PCB layout must be taken into consideration.

CURRENT LIMITING

The maximum current limit remains constant as the output voltage drops. However, once the impedance of the short across the output is small enough to make the output voltage drop below the specified Output Current Limit Shutdown Voltage, the converter turns off.

The converter then enters into "hiccup mode" where it repeatedly turns on and off until the short circuit condition is removed. This prevents excessive heating of the converter or the load board.

SHORT CIRCUIT CONDITION

When the converter is in current-limit mode, the output voltage will drop as the output current demand increases and then the converter will be shut down. If the short-circuit condition persists, another shutdown cycle will be initiated. This on/off cycling is referred to as "hiccup" mode. The hiccup cycling reduces the average output current, thereby preventing internal temperatures from rising to excessive levels. The module is capable of enduring an indefinite short circuit output condition.

OUTPUT OVERVOLTAGE PROTECTION

When the output voltage exceeds the overvoltage protection set point, the module enters the overvoltage protection mode. The output voltage is keeped at the overvoltage protection point and

is limited to the continuous increase of the output voltage. When the external overvoltage condition disappears, the module automatically returns to normal operation.

INPUT UNDERVOLTAGE SHUTDOWN AND START-UP THRESHOLD

Once operating, module will not turn off until the input voltage drops below the Undervoltage Shutdown threshold. Subsequent re-start will not occur until the input is brought back up to the Start-Up Threshold. This built in hysteresis prevents any unstable on/off situations from occurring at a single input voltage.

THERMAL SHUTDOWN

These ELC15W24/48 converters are equipped with thermal-shutdown circuitry. If environmental conditions cause the internal temperature of the DC-DC converter to rise above the designed operating temperature, a precision temperature sensor will power down the unit. When the internal temperature decreases below the threshold of the temperature sensor, the unit will auto restart.

TRIMMING OUTPUT VOLTAGE

ELC15W24/48 converters have a trim capability that allows users to adjust the output voltages. Output voltage can be trimmed up or down by a trim pin. The maximum output voltage adjustment range is -10% to 10%. If you need the trim fuction, please contact us to help you. If the trim fuction is not used, keep TRIM pin floating.
